2. The Docker daemon pulled the "hello-world" image from the Docker Hub.
(amd64)
3. The Docker daemon created a new container from that image which runs the
executable that produces the output you are currently reading.
4. The Docker daemon streamed that output to the Docker client, which sent it
to your terminal.

To try something more ambitious, you can run an Ubuntu container with:
\$ docker run -it ubuntu bash

Question 4:

Create a Kubernetes cluster in IBM cloud and deploy helloworld image or jobportal image and also expose the same app to run in nodeport.

Creating kubernetes cluster in IBM cloud and exposing nodeport:

A screenshot of the IBM Cloud Kubernetes Dashboard. The top navigation bar shows 'Clusters / mycluster-free' with a status of 'Normal' and 'Expires in 29 days'. There are buttons for 'Help', 'Kubernetes dashboard', and 'Actions...'. The left sidebar has tabs for 'Overview', 'Worker nodes', 'Worker pools', and 'DevOps'. The main content area shows a table of worker nodes. The table has columns: Name, Status, Worker pool, Zone, Private IP, Public IP, and Version. There is one node listed with ID '0000008c', status 'Normal', worker pool 'default', zone 'Milan 01', private IP '10.144.187.51', public IP '159.122.179.68', and version '1.23.12_1549'. At the bottom, it shows 'Items per page: 25' and '1-1 of 1 item'.
